

WORK EXPERIENCE

FINASTRA

2018 - PRESENT

Technical CS and .NET Developer

- As a **.NET Developer**, I have worked on developing and maintaining some internal apps, such as:
 - A comprehensive Windows Forms application developed and maintained for our Technical Support team, which :
 - > Troubleshoots the team's ecosystem by logging and analyzing issues.
 - > Automates the generation of complex ARCH environment setups, simplifying configuration processes.
 - > Fetches and validates environment information from various sources (machines, files, databases), significantly reducing manual effort.
 - > Acts as a quick 'Control Panel' for managing and monitoring technical envs.**Technologies used:** .NET Framework, Windows Forms, Dapper, Linq.
- A Blazor WASM ASP.NET application built on .NET 6, used by our entire internal CS team to retrieve detailed environment information and support various tasks based on user roles and teams needs.
Technologies used: .NET Core, ASP.NET Core, Blazor WASM, Microsoft SQL Server, Entity Framework, Web APIs, HTML, CSS, Javascript, IIS, Microsoft Individual User Accounts.
- As a **Database Administrator** with L1 support, I manage Oracle/MSSQL Servers, including creating, configuring, and maintaining databases and servers. I performed SQL query optimization and ensured data integrity through robust validation processes and backups, while efficiently allocating and managing database space to enhance performance and reliability.
- As an **ARCH Environment Administrator** with L3 support, I manage Windows/Unix Servers, I create and configure client environments, resolve Jira tickets, and troubleshoot technical issues. Additionally, I automate repetitive tasks using CMD, PowerShell and Bash scripting, enhancing efficiency and reducing manual effort in environment management.

Dental Technician

2014 - 2018

Crafting dental restorations . I worked as a dental technician before transitioning to IT.

PERSONAL PROJECTS

I have independently developed two .NET Core apps, production-ready projects, used by Dental Clinics in Romania to meet their needs.

MEGAGEN - Dental Implants

A Blazor WASM project, deployed on Azure, provides a user-friendly platform for uploading and viewing dental patient files and patient data. It includes Microsoft Authentication for secure login.

Additionally, I developed a 3D file viewer for enhanced visualization using the Three.js JavaScript library.

GitHub Repo: <https://github.com/adrian941/DentalReports>

Technologies used: .NET Core, ASP.NET Core, Blazor WASM, Microsoft SQL Server, Entity Framework, RESTful API, HTML, CSS, Javascript, Azure Services (Azure App Service, Azure Blob Storage, Azure Microsoft Database)

DECADENT - Orthodontics

A Blazor Server project designed to help dental technicians manage patient cases, oversee material purchases, and handle dental work based on custom recipes. It generates custom monthly reports on investments, earnings, and profits, and organizes laboratory workflow efficiently.

Technologies used: ASP.NET Core, Blazor Server, Dapper, HTML, CSS, JS.

The code for all applications was written following best practices, with a focus on Design Patterns and SOLID principles.

ADRIAN ALEXANDRESCU
.NET DEVELOPER

CONTACT

- www.linkedin.com/in/aalexand94
- București, România

TECHNOLOGIES

- .NET Core, .NET Framework
- HTML, CSS, Javascript, Blazor
- Microsoft SQL Server
- Entity Framework, LINQ
- REST API
- Git, GitHub, Azure Repos
- Azure Services (App Service, Blob Storage, Microsoft SQL Database)
- Asynchronous, Parallel programming

EDUCATION

2013 - 2016

Dental Technology
UMF Carol Davila

2009 - 2013

Mathematics and Informatics
Informatics Intensive
Nicolae Bălcescu National College

ENGLISH LEVEL
